INTRODUCTION TO QADI LINOTYPE

Qadi font is a graceful, yet dynamic, extra-bold Arabic heading face which includes all the traditional range of letterforms. It was produced in the mid-1980s by Linotype-Hell Limited under the design direction of Walter Tracy and has proved to be a very popular typeface for magazine and newspaper publication. Qadi font was converted to OpenType font format in 2001 taking full advantage of digital technology for accurate diacritical positioning and kerning refinements, ensuring high quality typography. Qadi not only enjoys great popularity as a headline typeface but can be used successfully within text work.

Qadi is a Trademark of Heidelberger Druckmaschinen AG, which may be registered in certain jurisdictions, exclusively licensed through Linotype Library GmbH, a wholly owned subsidiary of Heidelberger Druckmaschinen AG.

INTRODUCTION TO OPENTYPE FONTS

OpenType “.otf” fonts are compact single-file cross-platform fonts, which can have extended language support based on Unicode, and enhanced typographic layout features. For OpenType information, including application compatibility notes, Glyph Complement PDFs, and Specimen Book PDFs, visit Adobe’s Web site at <http://www.adobe.com/type/opentype>.

OPENTYPE FEATURE HIGHLIGHTS

The most prominent OpenType layout features in these fonts are: Arabic/Hindi/Farsi digits, Farsi specific letters, standard ligatures and mark positioning.

Note that the choice of which OpenType features are supported is specific to each application.

LANGUAGE COVERAGE

Arabic, Farsi.

WINDOWS CODE PAGES SUPPORTED

1256 Arabic

MAC OS LANGUAGE SUPPORT

On Mac OS 9.x only the MacRoman encoding is supported for OpenType font. Therefore support for Arabic and Farsi will be available only in Adobe ME applications. For this reason you have to install the fonts (the 2 .otf files) in Adobe font folder : HD\Application Support\Adobe\Fonts.

Mac OSX.1.5 is still not supporting Arabic. This support should be available in future Mac OSX releases.
