INTRODUCTION TO MARIAM LINOTYPE

Mariam was designed by the famous Arabic type designer Ismet Chanbour, who also designed Al Harf Al Jadid -another highly successful typeface from the Linotype Library, Mariam is a modern headline typeface and was produced in PostScript font format by Linotype-Hell in 1992. Ismet Chanbour has perhaps more experience than any other designer of this style of compact ultra-heavy Arabic, and Mariam provides a welcome addition to the range of headline faces available in Linotype PostScript Arabic Typeface Library.

Mariam is characterized by certain design features which contribute to its stylistically lively, yet graceful appearance: downward-pointing tails combining with the swinging finial strokes of certain characters, and the various 'cut-away' effects, This headline face successfully offers a wide range of applications, from very large, bold poster-size work to use at 18 point for emphasis in text work.

Mariam is a Trademark of Heidelberger Druckmaschinen AG, which may be registered in certain jurisdictions, exclusively licensed through Linotype Library GmbH, a wholly owned subsidiary of Heidelberger Druckmaschinen AG.

INTRODUCTION TO OPENTYPE FONTS

OpenType “.otf” fonts are compact single-file cross-platform fonts, which can have extended language support based on Unicode, and enhanced typographic layout features. For OpenType information, including application compatibility notes, Glyph Complement PDFs, and Specimen Book PDFs, visit Adobe’s Web site at <http://www.adobe.com/type/opentype>.

FOLDER CONTENTS

1 font file (one style per file) and this presentation pdf.

Regular : MariamLinotype.otf

OPENTYPE FEATURE HIGHLIGHTS

The most prominent OpenType layout features in these fonts are: Arabic/Hindi/Farsi digits, Farsi specific letters, standard ligatures and mark positioning.

Note that the choice of which OpenType features are supported is specific to each application.

LANGUAGE COVERAGE

Arabic, Farsi.

WINDOWS CODE PAGES SUPPORTED

1256 Arabic

MAC OS LANGUAGE SUPPORT

On Mac OS 9.x only the MacRoman encoding is supported for OpenType font. Therefore support for Arabic and Farsi will be available only in Adobe ME applications. For this reason you have to install the fonts (the 2 .otf files) in Adobe font folder : HD\Application Support\Adobe\Fonts.

Mac OSX.1.5 is still not supporting Arabic. This support should be available in future Mac OSX releases.
