

RHCSA Completed Outline

- 01 Getting started
 - 01 Getting started
 - 02 What is OS
 - 03 Linux History
 - 04 Why Linux
 - 05 Linux Major Distros
 - 06 Why should I pay
 - 07 About RHCSA Exam
 - 08 RHCSA Main Objectives
- 02 Installation
 - 09 Getting Red Hat Family Linux
 - 10 Linux installation env
 - 11 RHEL installation
 - 12 RHEL startup
 - 13 Linux File Hierarchy Structure
 - 14 Custom Partitioning
- 03 Linux basics and Using Essential Tools
 - 15 What is Terminal
 - 16 Changing active shell
 - 17 What is a linux command
 - 18 Some basic commands
 - 19 Finding the Appropriate Help
 - 20 Using mandb
 - 21 What is VIM text editor
 - 22 Working with VIM
 - 23 Working with nano
 - 24 Bash History
 - 25 Linux globbing
 - 26 Using IO Redirection and Pipes
- 04 Essential File Management Tools
 - 27 Understanding Linux File System Layout
 - 28 Essential File Management Tasks
 - 29 Essential File Management Tasks
 - 30 Searching data using find
 - 31 Searching data using locate
 - 32 File Archive and Compression
 - 33 Working with tar
 - 34 Using bzip2 and gzip
 - 35 Linux inode and links
 - 36 Creating Hard links
 - 37 Creating symbolic link

- 05 Working with text files
 - 38 Using cat and tac
 - 39 Using head and tail
 - 40 Using more and less
 - 41 Working with cut
 - 42 Working with grep
- 06 Managing Users and Groups
 - 43 Understanding Linux Users
 - 44 Creating new user
 - 45 Set user password properly
 - 46 Changing user property
 - 47 Creating a system account
 - 48 Understanding User Configuration Files
 - 49 Understanding User Configuration Files
 - 50 Understanding Linux Groups
 - 51 Managing users group
 - 52 Password management
- 07 Managing Permissions
 - 53 Understandin Ownership
 - 54 Changing ownership of files and directories
 - 55 Understanding Persmissions
 - 56 Modifying Permissions
 - 57 Something to note about permissions
 - 58 Understanding Linux Special Permissions
 - 59 Working with SUID permission
 - 60 Working with GUID and stickybits permissions
 - 60.1 Working with octal-based permissions
 - 61 Understanding Linux access control lists
 - 62 Implementing access control list
 - 63 defaulting access control lists
- 08 Linux Basic Network Management
 - 64 Linux Basic Networking
 - 65 Managing runtime network Configuration with the ip Command
 - 66 Storing Network Configuration Persistently
 - 67 Managing Persistent Network Configuration with nmcli
 - 68 Managing Persistent Network Configuration with nmtui
 - 69 Verifying Network Configuration Files
 - 70 working with runtime default route and dns
 - 71 Changing hostname of server
- 09 Linux Remote Management
 - 72 Linux Remote Management
 - 73 Remote SSH
 - 74 Transferring data using SCP
 - 75 Working with Filezilla

- 76 working with SCP in linux
 - 77 Working with Cockpit
 - 78 How SSH auth works
 - 79 Configuring Key base authentication
 - 80 Manually adding public key to server
 - 81 Stealing id_rsa
 - 81.1 Working with sshd_config
- 10 Linux Process and Memory Management
 - 82 Understanding Jobs and Processes
 - 83 Managing Shell Jobs
 - 84 Getting Process Information with ps
 - 85 Understanding Performance Load
 - 86 Understanding Performance Load with uptime
 - 87 Monitoring System Activity with top
 - 88 Sending Signals to Processes
 - 89 Understanding Priorities and Niceness
 - 90 Changing Process Nice Values
 - 91 Understanding Memory Usage
- 11 Software Management in Linux
 - 92 Understanding Meta Package Handlers
 - 93 Working with dnf and yum
 - 94 dnf Group installation
 - 95 Understand RPM queries
 - 96 Understand RPM queries
- 12 Scheduling Tasks
 - 97 Understanding Linux Scheduling
 - 98 Understanding cron and anacron
 - 99 Working with cron jobs
 - 100 Working with cron jobs more examples
 - 101 Using crontab
 - 102 Working with anacron
 - 103 Working with at and batch
- 13 Configuring Logging
 - 104 Understanding Linux Log system
 - 105 Working with rsyslog and journald
 - 106 Create custom rule
 - 107 Understanding Journald and rsyslogd log Retention
- 14 Managing Partitions
 - 108 Understanding Disk Layout
 - 109 Understanding GPT and MBR Partitions
 - 110 Creating MBR Partitions with fdisk
 - 111 Creating GPT Partitions with gdisk
 - 112 Understanding File System Differences
 - 113 Making the File System

- 114 Mounting the File System Manually
 - 115 Mounting Partitions via etcfstab
 - 116 Creating a Swap Partition
- 15 Managing LVM Logical Volumes
 - 117 Understanding LVM
 - 118 Creating an LVM Logical Volume
 - 119 Understanding Device Mapper and LVM Device Names
 - 120 Growing an LVM Logical Volume
 - 121 Shrinking an LVM Logical Volume
- 16 Working with Linux systemd
 - 122 Understanding Systemd
 - 123 Managing Services in a Systemd Environment
 - 124 Understanding Systemd Targets
 - 125 Switching between Systemd Targets
 - 126 Booting into different target
 - 127 Reset root password
- 17 Working with firewalld
 - 128 Understanding Linux firewall
 - 129 Creating custom firewalld service
 - 130 Adding custom rules
 - 131 Some additional configurations
 - 132 Using firewall-config
 - 133 Firewalld panic mode
- 18 SELinux
 - 134 Understanding SELinux
 - 135 Changing SELinux modes
 - 136 Getting system resource security context
 - 137 Understanding SELinux Labels
 - 138 Changing files security context type
 - 139 Httpd config
 - 140 Httpd SELinux tshoot
 - 141 SSHD name-bind SELinux tshoot
 - 142 SELinux booleans
- 19 Bash shell scripting
 - 143 Getting started with shell scripting
 - 144 Creating our first script
 - 145 Simple administration tasks
 - 146 Variables
 - 147 Reading user input
 - 148 Conditional Statements
 - 149 Conditional Statements demo
 - 150 File and Directory conditional statements
 - 151 Loops
 - 152 For loop demo

- 153 While loop demo
 - 154 Exit status code
 - 155 Creating custom backup script
 - 156 Network status check script
 - 157 Network status check script optimization
- 20 Container Management
 - 158 Understanding Container Management
 - 159 Container runtimes
 - 160 Dockerhub platform
 - 161 Creating container
 - 162 Container management
 - 163 Persistent storage and port forwarding
 - 164 Podman systemd config
